

The geodata game changer

DIGITAL TWIN PLATFORM

SAAS

Turn your data into a digital twin

GéoCassini is an eco-responsible SaaS platform that transforms any type of data into a unified digital twin.

Thanks to our integrated approach, combining precise geographic data, 3D modelling technologies and advanced analysis tools, users can better understand the interactions between infrastructure, territories and natural phenomena, and make informed decisions for urban management, risk prevention or the ecological transition.

GéoCassini was awarded the “Solar Impulse Efficient Solution” label in February 2021 and in April 2024.

As well as cutting your CO₂ emissions, it also cuts your costs.

Platform features

GéoCassini is a 100% web platform available in SaaS mode. Store, manage, use, update and exchange all of your data.

01 Use all your data in the cloud with **DataBase**

- ◆ Unlimited storage
- ◆ Simplified project management
- ◆ Ease of use
- ◆ Data accessibility
- ◆ Data traceability

02 Create projects for all your needs in **Project**

- ◆ Instant updates
- ◆ No limitations
- ◆ Data association
- ◆ Availability

03 Commercialise DataBase content with **MarketPlace**

- ◆ Data valorisation
- ◆ Opportunity development

Our strength? Our partner ecosystem

Since 2018, GéoCassini has been building a growing community of expert partners who continually enrich the platform with new skills and industry solutions.

Technology partners

Software vendors and algorithm developers create specialised industry applications available directly from the GéoStore: automatic object detection, network analysis, BIM modelling, LIDAR point cloud processing, and much more.

Concrete benefits for you

interoperability

They say it better than we do

“GéoCassini’s great strength is having brought together an ecosystem of partners, giving access to turnkey solutions directly from the platform.”

Alexis Mariani Deputy CEO, Cities
& Territories

“To date, integrating GéoCassini into our one-off operations has exceeded our expectations, providing secure hosting of our data and easy access to our 3D geospatial information.”

Chantal Arguin
President
